**Dear Senator McCaskill,**

I am writing to ask you to support an energy future that is sustainable, secure and climate friendly. Current energy policies will not work. I urge you to end all subsidies and incentives for both fossil fuels and nuclear power, as these are dirty, dangerous and finite. We must instead make it our national policy to do more with less, through making our economy much more energy efficient, and to move as rapidly as possible to clean, safe, renewable sources like sun, wind, tidal and geothermal energy. Please take action to promote energy policies that assure us ample energy for generations to come without the risks inherent in fossil fuels and nuclear power.

Thank you,
